'Slapped Cheek Syndrome'

There have been a number of cases in school recently of 'Slapped Cheek Syndrome'. *Taken from NHS website* - 'Slapped Cheek Syndrome is usually mild and should clear up without specific treatment. If you or your child is feeling unwell, you can try the following to ease the symptoms:

- rest and drink plenty of fluids - babies should continue their normal feeds
- for a fever, headaches or joint pain, take painkillers e.g. paracetamol or ibuprofen (children under 16 shouldn't take aspirin)
- to reduce itchiness, you can take antihistamines or use an emollient (moisturising lotion) - some antihistamines are not suitable for young children - check with your pharmacist first.

Unless you or your child is feeling unwell, there's no need to stay away from school or work once the rash has developed, as the infection is no longer contagious by this point.

If you are unsure, always consult your GP.

Running Club

Running Club has now finished until Easter. It will re-commence after half-term as Athletics Club. Letters will be sent out nearer the time.
